

# HOW TO MEASURE BLINDS

1. Measure in 3 places across your window reveal for the width. Measure at the top, middle and bottom. Write your measurements below.

1 (top) \_\_\_\_\_ 2 (middle) \_\_\_\_\_ 3 (bottom) \_\_\_\_\_

Take the smallest measurement, which is the narrowest width of your window. This is the width measurement you will need to provide. (I will deduct the allowance needed for the headrail and blind to fit appropriately in the window.)

2. Measure in 3 places across your window reveal for the drop. Measure at the left, middle and right. Write your measurements below.

A (left) \_\_\_\_\_ B (middle) \_\_\_\_\_ C (right) \_\_\_\_\_

Take the smallest measurement, which is the shortest drop of your window. This is the drop measurement you will need to provide. (I will deduct the allowance needed for blind to sit just off the window sill.)
